Aurora X200 Drone - Owner Guide

Extended Warranty
The Aurora X200 drone includes an extended warranty of 36 months when the product is registered within 14 days of delivery. The warranty covers the airframe, the motors, and the flight controller. Damage caused by crashes or water immersion is not covered.

Battery Care
The lithium battery of the Aurora X200 should be stored at 60 percent charge when it is not used for more than 10 days. A fully charged battery provides up to 34 minutes of flight time. Never charge the battery immediately after a flight; let it cool down for at least 20 minutes first.

Return Policy for Drones
Drones may be returned within 15 days of delivery if the seal on the box is unbroken. Opened drones are accepted only when a manufacturing defect has been confirmed by our service team.
